

12 November 2013

Even more performance for the New Holland CR combine harvester

- *Dynamic Feed Roll™ technology*

At the Agritechnica 2013 trade fair, New Holland will unveil the Dynamic Feed Roll™ technology as an option for the powerful twin-rotor combine harvesters, the CR8000 and CR9000.

The feed roll with its new dynamic stone protection system is installed tangentially across the two longitudinal rotors in the combine harvester.

The Dynamic Feed Roll delivers the harvested grain uniformly to the twin rotors as well as providing an effective method for stone protection on the move, by way of a stone catcher trough beneath the feed rotor.

Many years of trials at the R&D Centre in Zedelgem have demonstrated that this feed roll delivers tangible benefits in terms of grain quality. Furthermore, the tests have shown that the Dynamic Feed Roll requires no additional power requirement because the improved crop delivery to the rotor area actually reduces the need for power.

The advantages for the user are very evident indeed:

- continuous 'non-stop' stone protection
- excellent grain quality
- improved crop flow through continuous supply to the rotor
- less strain on the rotor drives

The Dynamic Feed Roll™ technology is being offered as an option for all CR combine harvesters from Agritechnica 2013 onwards.

New Holland Agriculture's reputation is built on the success of our customers, cash crop producers, livestock farmers, contractors, vineyards, or grounds care professionals. They can count on the widest offering of innovative products and services: a full line of equipment, from tractors to harvesting, material handling equipment, complemented by tailored financial services from a specialist in agriculture. A highly professional global dealer network and New Holland's commitment to excellence guarantees the ultimate customer experience for every customer.
