

New Holland Agriculture Achieves World Record Title for Most Soybeans Harvested within Eight Hours with the CR8.90 Series Combine

- **Soybean harvesting world record: 16,157 bushels in 8 hours with CR8.90**
- **CR Series – a record-breaking most productive combine range**

New Holland, Pa. (April 26, 2017) – New Holland Agriculture has set a new World Record by harvesting an impressive 16,157 bushels of soybeans in eight hours with the CR8.90 combine. The record-breaking performance, which took place in the Bahia State of Brazil, was certified by independent adjudicator RankBrasil.

“Setting the world record for harvesting 16,157 bushels of soybeans is an achievement we’re very proud of and it demonstrates the power and productivity of the CR8.90”, stated Dan Valen, Director of Product Marketing North America. “Similar to the CR10.90 smashing the World Record for wheat harvesting in 2014, the CR8.90 delivered an exceptional performance in setting this record. Both of these accomplishments reinforce the New Holland CR Series and Twin Rotor™ technology as best-in-class, worldwide.”

Record-breaking performance

The record was set on April 5, 2017 at the Villa Panambi farm, belonging to the Mingori Brothers, in the Bahia State of Brazil, with the support of their dealer Jaraguá Bahia, based in nearby Luiz Eduardo Magalhães City.

On record setting day, moisture was high due to ¾ inch rain at 5:00 am, and temperature ranged from 77 to 82.4 degrees Fahrenheit. Harvesting started at 10:30 am and finished at 5:30 pm, having harvested approximately 222 acres (90 hectares). CR8.90’s average throughput was 2,020 bushels/hour in a crop yielding an average of 72.6 bushels/acre, and 17% average moisture content. The record-setting performance and efficiency was achieved by harvesting 73.5 bu of soybean per gallon of fuel and entirely overseen and verified by an official adjudicator from independent organization RankBrasil, which certified the record.

CR Series – a record-breaking combine range

The CR8.90 follows on the footsteps of the range topping CR10.90, which proved it is the world’s highest capacity combine when it captured the World Record for harvesting an impressive 29,321 bushels of wheat in eight hours in 2014 – a title it holds to this day.

CR combines are able to achieve such outstanding performances thanks to New Holland’s innovative Twin Rotor™ technology which offers best-in-class productivity, efficiency and grain quality; IntelliSteer® auto guidance, which enables operators to harvest around the clock; Twin Pitch

PRESS RELEASE

Plus rotor technology that can improve capacity in high moisture conditions by up to 10% and the optional Dynamic Feed Roll™ with integrated dynamic stone protection, which improves the CR's already impressive capacity by up to 10% as well as enhancing crop flow into the rotors and reducing grain crackage. Key record statistics

Total time harvested	8 hours
Amount of soybean harvested	16,157 bushels
Average bushels per hour	2,020 bushels/hour
Area harvested	222 acres (90 hectares)
Fuel efficiency - bushel soybean/gal	73.5 bushels/gallon
Average moisture	17%
Average yield	72.6 bushel/acre

About New Holland

New Holland Agriculture and New Holland Construction sell and service an innovative line of agricultural and construction equipment, including a full line of tractors, hay and forage equipment, harvesting, crop production, skid steer and compact track loaders, compact wheel loaders, tractor loader backhoes and mini excavators. Sales, parts and service are provided by more than 1,000 New Holland dealers throughout North America. More information on New Holland can be found at www.newholland.com/na.

New Holland is a brand of CNH Industrial N.V., a World leader in Capital Goods listed on the New York Stock Exchange (NYSE: CNHI) and on the Mercato Telematico Azionario of the Borsa Italiana (MI: CNHI). More information about CNH Industrial can be found online at www.cnhindustrial.com
