Siemens PLM Software

# Building a strong pipeline of engineering and digital manufacturing talent

Siemens PLM Software integrates data, processes and business systems to enable users to efficiently and cost-effectively manage this information throughout the lifecycle of a product.

Between 2012 and 2014, Siemens granted enough PLM software licenses to support over
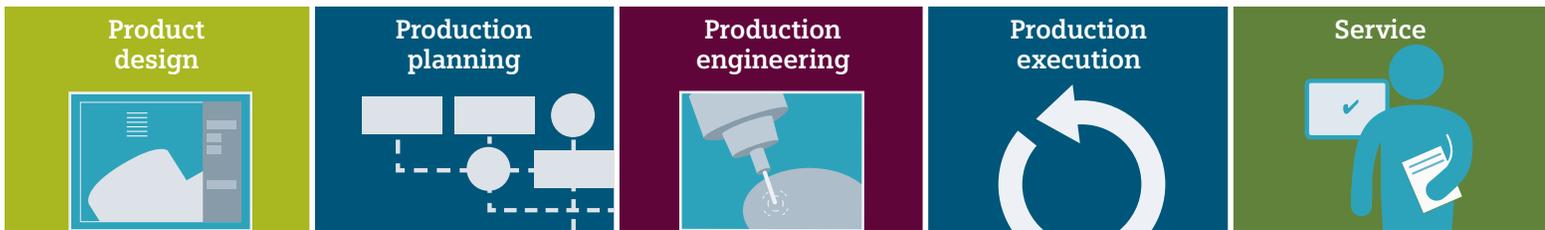

1 million students...

...at more than **3,000 educational institutions** in **67 countries** across **5 continents.**

The same software is used by more than

77,000 global customers...

...for digital product design, simulation, analysis, manufacturing and product data management...

Product design	Production planning	Production engineering	Production execution	Service

...in a variety of industries, such as:

Automotive and transportation	Aerospace and defense	Industrial machines and heavy equipment	Electronics and semiconductor	Marine	Energy and utilities	Medical devices and pharmaceutical	Consumer products and retail
