

evoSPEED NETFIT INDOOR

One shoe, infinite lacing styles

Indoors just got faster.

PUMA unveils NETFIT – a revolution in sports, performance and lifestyle footwear. NETFIT is a one—of-a-kind lacing system that covers the upper of the shoe in a weave of netting. Every hole in the high-grade engineered netting is there to be laced, giving users complete control and versatility over how they lace their shoe - meaning that no matter your style, needs or the shape of your feet, you can customize your shoe to fit perfectly for ultimate comfort and complete confidence.

The new evoSPEED NETFIT Indoor is made for the fast and agile indoor athlete. It features NETFIT, PUMA's innovative lacing technology, giving users customizable lacing options and entirely individualized fit. A spandex sock rising to the ankle will secure the foot for a stable, comfortable fit. The lightweight EVA midsole features PUMA's IGNITE foam in the heel to maximize cushioning on hard indoor surfaces. Further stability is provided by an embedded SPEEDTRACK sole that gives real torsional strength and grip to the user.

The evoSPEED NETFIT Indoor wants to know how fast you can be indoors – why don't you show it?
