New Holland Agriculture Launches New T4 Low Profile Tractor

- *Low profile and centre of gravity: for utility applications such as olive groves and mountains*
- *Folding ROPS and low cab height: versatility with a low profile*
- *Tight turning angle: extreme agility in a light, compact tractor*
- *Wide track: great stability in a compact size*
- *MegaFlow™ pump and dedicated steering pump: high lift capacity*

New Holland Agriculture extends its offering of utility tractors with the addition of the new T4LP Series, a highly versatile, heavy duty tractor with low profile. The 4 models, ranging from 75 hp to 105 hp, are all available in cabin and ROPS versions. “The T4LP Series meets the need for high versatility typical of the utility segment, but with a low profile,” explains Luca Mainardi, Head of Tractor and Precision Land Management Product Management. “It also covers a niche of the specialty segment for applications such as olive groves that require a heavy duty tractor with low profile, or mountainous areas where a low centre of gravity and wide track stability are needed to work on steep slopes.”

Low profile and centre of gravity: for utility applications such as olive groves and mountains

The new T4 LP meets the requirements of important applications that require a low profile, for example olive orchards, or a low centre of gravity, like farming on the steep slopes of mountainous areas.

The T4 LP is the last in a long lineage of tractors that began in 1985 with the introduction of the Fiat 66 LP series that featured the wider axles of conventional tractor but low engine covers and mudguards, so that in the ROPS version, they could work in covered vineyards and slip under low branches of fruit and olive trees.

Folding ROPS and low cab height: versatility with a low profile

The T4 LP is designed to work in orchards, olive groves and wide spaced vineyards. The lowered seat and folding ROPS frame give it an overall height of just 1370 mm, while the cab version is a squat 2173 mm. The operator platform is mounted on silent blocks to reduce noise and vibration, for the operator's greater comfort and reduced fatigue.

PRESS RELEASE

Tight turning angle: extreme agility in a light, compact tractor

The T4 LP tractors are designed for agility. The dynamic fenders on the front axle enable the tight 55 degree turn angle that gives the tractor the ability to deliver an un-braked turn radius as low as 4000 mm. In extreme terrain, the standard front axle oscillation of 8 degrees can be increased to a maximum of 11 degrees for greater ground contour following.

Wide track: great stability in a compact size

The T4 LP tractor offers 24 inch, 28 inch or 30 inch track width settings to give an overall width that can be adjusted from a minimum of just 1588 mm to an ultra-stable 2432 mm.

MegaFlow™ pump and dedicated steering pump: high lift capacity

The T4LP features a standard hydraulic pump delivering 48.6 l/min, which can be raised to 63.8 l/min with the optional MegaFlow™ pump. In addition, a dedicated power steering pump ensures that all the main pump's flow goes to the implement while steering remains light. The rear linkage has a lift capacity of 2600 kg. An optional front linkage that will lift 1360 kg can also be specified, further extending this tractor's versatility.

Model	Engine (litres)	Maximum Power (hp [cv])	Maximum lift capacity (kg)
T4.75 LP	3.2	78	2600
T4.85 LP	3.2	88	2600
T4.95 LP	4.5	97	2600
T4.105 LP	4.5	106	2600

New Holland Agriculture's reputation is built on the success of our customers, cash crop producers, livestock farmers, contractors, vineyards, or grounds care professionals. They can count on the widest offering of innovative products and services: a full line of equipment, from tractors to harvesting, material handling equipment, complemented by tailored financial services from a specialist in agriculture. A highly professional global dealer network and New Holland's commitment to excellence guarantees the ultimate customer experience for every customer.
