

### **CASE Construction Equipment Releases 4-in-1 Fluid Testing Kit**

*Systemgard™ kits provide advanced diagnostic, preventative maintenance testing designed to evaluate fluid condition, component wear and contamination.*

Racine, Wis., May 3, 2016

[CASE Construction Equipment](#) announced the release of the 4-in-1 Systemgard™ Fluid Analysis Kit. The preventative maintenance tool provides a picture of fluid and internal system conditions without users having to disassemble the machine. It monitors system cleanliness and filtration efficiency, which helps extend the life of the machine and reduce replacement costs, and helps ensure equipment reliability and uptime.

The four fluid tests that come in the pack are:

- Engine oil analysis
- Coolant analysis
- Transmission/Hydraulic oil analysis
- Diesel fuel analysis

The state-of-the-art fluid analysis identifies dirt, wear particles, fuel dilution and coolant-contaminants that can cause catastrophic failure or shorten equipment life. The testing and analysis included in the kit ensures that units are up, running and staying efficient. It also provides valuable sampling histories that justify higher equipment resale values.

Systemgard™ labs are ISO 17025 A2LA accredited – the highest level of quality attainable by a testing lab, backed by the most stringent accrediting body in the industry. Each test report provides severity codes and troubleshooting recommendations, while severe findings are communicated immediately via e-mail or fax.

For more information on the fluid test kits, contact your local dealer or visit [www.CaseCE.com](http://www.CaseCE.com).
