

CASE Introduces Five New Excavator Plate Compactors

New excavator plate compactors provide powerful trench and slope compaction without introducing an operator or separate machine to those environments.

Racine, Wis., April 20, 2015

[CASE Construction Equipment](#) introduces five new plate compactors to its attachments lineup – the SC-30, SC-60, SC-80, SC-110 and SC-220. The plate compactors are ideal for utility work, and are primarily used to compact the foundation in shallower trenches and prevent movement/ground upheaval. These plates run on unidirectional hydraulics and are available in a variety of sizes, ranging from 19 x 20 inches to 32 x 42 inches.

For soil compaction, the SC series can compact up to 4 feet – more than five times the efficiency of handheld compactors. For slopes, the SC series takes on the challenge of efficiently compacting materials on an incline. The new plate compactors can also drive and extract piles, fence posts, guardrails and more. Because of their design and ease of use, the plate compactors simplify compaction work without introducing another machine or operator into the already cramped space.

Durable, Efficient Design

The SC series of plate compactors is designed for heavy compaction tasks, with a unique “Angle Technology” base plate design that transfers and distributes vibratory forces more efficiently, and ultimately protects and extends the life of the compactor and carrier. The design allows for trench compaction in narrow areas where access is limited. The base plate also offers a lower center of gravity, which puts the attachment’s energy where it’s needed the most.

The plate compactor’s shock mounts are tilted 15 degrees outward, allowing better force distribution across the plate, less stress on the compactor during operation and reduced wear. This design also improves performance and durability. Another feature of the plates is their flow control with a reverse flow check valve that’s standard on all models and a stainless steel pressure relief valve for added safety.

The SC series features a wide variety of custom mountings available to fit a variety of carriers.

Maintenance Made Easy

The plate compactor requires zero maintenance as it has a continuous oil bath lubrication system that extends the life of the bearings. Each SC series plate compactor is also covered under a two-year limited warranty.

PRESS RELEASE

CASE Construction Equipment sells and supports a full line of construction equipment around the world, including the No. 1 backhoe loaders, excavators, motor graders, wheel loaders, vibratory compaction rollers, crawler dozers, skid steers, compact track loaders and rough-terrain forklifts. Through CASE dealers, customers have access to a true professional partner with world-class equipment and aftermarket support, industry-leading warranties and flexible financing. More information is available at www.CaseCE.com.

CASE Construction Equipment is a brand of CNH Industrial N.V., a World leader in Capital Goods listed on the New York Stock Exchange (NYSE: CNHI) and on the Mercato Telematico Azionario of the Borsa Italiana (MI: CNHI). More information about CNH Industrial can be found online at www.cnhind.com.
