

FPT Industrial Sete Lagoas engine plant achieves Silver Level designation in World Class Manufacturing

CNH Industrial's global powertrain brand records another success in the World Class Manufacturing program at its Sete Lagoas plant in Brazil. The site manufactures engine models from the F1, NEF and S8000 engine families and employs some 270 people. It was awarded due to a number of factors including Motivation of Operators, Professional Maintenance, Safety, Level of Detail and Level of Expansion.

London, December 13, 2016

The FPT Industrial engine plant in Sete Lagoas, Brazil has successfully reached another important milestone in its mission to develop industry leading industrial engines according to the principles of World Class Manufacturing (WCM). Following a recent audit, the global powertrain brand of CNH Industrial N.V. (NYSE: CNHI /MI: CNHI) has received a Silver Level WCM designation for its Brazilian facility which produces industrial engines.

Established in 2000, the Sete Lagoas site has quickly grown to operate at a high standard with this latest achievement seeing it reach the same ranks as its European sister sites in Turin and Foggia in Italy and Bourbon Lancy in France. It covers 14,000 square meters, housing product manufacturing for the F1, NEF and S8000 engine families. The site employs some 270 individuals and exports to national and international markets.

WCM is one of the global manufacturing industry's highest standards for the integrated management of manufacturing plants and processes. It is a pillar-structured system based on continuous improvement, designed to eliminate waste and loss from the production process by identifying objectives such as zero injuries, zero defects, zero breakdowns and zero waste. To certify improvements, a system of periodic audits delivers an overall score for each plant that is the basis for three achievement levels: Gold, Silver and Bronze.

Sete Lagoas counted high scores in a number of different areas set out by WCM including: Motivation of Operators, Professional Maintenance, Safety, Level of Detail and Level of Expansion.

CNH Industrial operates six manufacturing sites and three R&D centers in Brazil. These facilities specialize in a range of different products from agricultural combines and tractors to sugar cane harvesters, heavy and light commercial vehicles, defense vehicles and construction equipment.
