

## **Discbine® Disc Mower-Conditioners**

*Fast, Smooth Cutting*

*You can rely on genuine Discbine® disc mower-conditioners for smooth trouble-free mowing, even in tough conditions.*

**Peace of mind direct from the factory** - When you buy any new Discbine® disc mower-conditioner equipped with a MowMax™ or MowMax™ II disc cutterbar, you're covered with one full year of base factory warranty, plus two additional years of disc cutterbar coverage. Cut confidently. Cut with New Holland.

**The definition of Disc Mower-Conditioners** - Even in tough conditions, a genuine Discbine disc mower-conditioner swiftly turns heavy crop into fast-drying windrows or swaths. An extensive model lineup provides you with numerous reliable choices. From the economical seven-disc models with a modest, nine-foot cut up to the highly productive 10-disc models that quickly knock down sixteen-foot with every pass, there's a model that's suitable for your acreage and operation.

**A cut above the rest: MowMax™ and MowMax™ II Cutterbars** - H7000 Series models cutting up to 10' 4" inches feature the proven reliability and performance of the classic MowMax disc cutterbar. For the greatest capacity, Discbine® Series 313 and 316 center-pivot models feature the MowMax II disc cutterbar, a cutterbar designed for the higher demands of large harvesting operations. It incorporates the large discs and heavy-duty components also found on Durabine™ disc heads for New Holland Speedrower® self-propelled windrowers.

**Conditioning systems for fast drying** - You'll harvest crops quickly and produce nutritious, high-value feed with your choice of three conditioning systems. Choose the gentle conditioning of rubber chevron-intermeshing rolls that save delicate leaves, steel chevron rolls for winter forage or long-stem and cane grasses, or LeaningEdge™ flails for fast drying of grass hay.

**Fast and simple in-field serviceability** - MowMax and MowMax II cutterbars feature a true modular design for smooth, quiet, trouble-free mowing as well as fast and inexpensive servicing. Driven through individually sealed gearboxes with dedicated oil reservoirs, modules are never at risk for oil starvation while cutting on hillsides. In the event that your mower hits an obstruction, the exclusive New Holland ShockPRO™ hubs absorb harmful impacts, protecting the cutterbar drive from damage. Even better, they're quick to replace in the field so you can keep cutting when the weather is right. Accidents happen and in the event of a significant collision, the true modular MowMax concept fully contains damage to the effected module to

minimize damage to the rest of the cutterbar. How? Break a knife? MowMax II cutterbars now feature optional QuickMax™ knives that provide you with the ability to change out knives in a matter of seconds.
