

Economy Disc Mowers

Fast mowing speeds at a price that goes easy on the wallet - The HM Series disc mowers deliver smooth, fast cutting speeds at a price that fits any budget. Available in three sizes — with cutting widths from 5 feet, 6 inches to 7 feet, 11 inches — these durable machines can mow through tough crops and rough field conditions.

Versatility - Use your HM Series disc mowers to conveniently mow fields, roadsides, around ponds and buildings.

Reliable Design

- **Clean, High Speed Cutting** - Slice through thick crops, even gopher mounds, at high speed with the HM Series disc mowers. Depending on the model, four, five or six low-profile, oval cutting discs use two knives per disc to slice through the wet grasses. Knives, made of high-quality steel, are reversible for twice the cutting life.
- **Enclosed Gear-Driven Cutterbar** - The enclosed gear-driven cutterbar provides years of reliable service. Discs are retained with six bolts for easier service.
- **Protection Against Field Damage** - Several important HM Series features fend off foreign objects and keep you moving through the field:
 - Rock guards and skid shoes protect the discs and carry the cutterbar over uneven ground.
 - A spring-loaded breakaway latch protects the cutterbar by allowing the mower to pivot back the instant it encounters an obstacle.
 - An adjustable flotation spring allows you to change cutterbar ground pressure.
- **Overrunning Clutch is Standard** - The 540-rpm PTO driveline with overrunning clutch protects the driveline and makes hook-up easy.

Convenient to Use

- **Easy Operation** - The simple design of HM Series disc mowers make them easy to use. A single-acting hydraulic cylinder makes it easy to lift the cutterbar at the end of each pass. Right-side swath divider wheel separates each cut path.
- **Simple Transport** - A transport lock makes it easy to move from field to field.
- **Easy Hookup** - The three-point-hitch mounting, two adjustable parking stands and a storage support for the PTO shaft make it easy to attach and remove HM Series mowers.
