

27th February 2017

New Holland flagship combines deliver even higher capacity with new Everest system and win "Machine de l'année" title at SIMA 2017

The jury panel of the 'Machine of the Year 2017' award bestowed the coveted title to the New Holland CR and CX combines featuring Everest System, in the Combine category at the SIMA show 2017.

The flagship rotary CR 7.90, CR8.80 and CR8.90 combines and super conventional CX7.90, CX8.70 and CX8.80 combines featuring the Everest levelling system have been rewarded this technical innovation and the benefits it brings to customers, with selection criteria focusing on innovative features, performance, productivity, cost of operation, ease of use and operator comfort.

This jury panel of this prestigious award is comprised of journalists representing leading European agricultural publications in partnership of DLV. Established in 1997, this award was given every two years at the Agritechnica show in Germany. Since 2015, every odd year it is awarded in France at the SIMA exhibition.

"This award recognises the unrivalled performance on steep in-field slopes that CR and CX combines have with Everest system, it has set a new benchmark in terms of harvesting productivity and efficiency for our customers working in those challenging conditions" said Carlo lambro Brand President of New Holland Ag. "Once again it testifies the commitment of New Holland in building the long-standing leadership in the combine segment".

The CX and CR Everest models deliver unrivalled performance on steep in-field slopes

New Holland's super conventional CX7.90 and CX8.70, CX combines and its flagship rotary CR 7.90, CR8.80 and CR8.90 combines featuring the Everest levelling system have been engineered to counteract steep in-field slopes and keep the threshing and separation system perfectly level offering high performance in side hills. The CX and CR Everest models compensate lateral slopes of up to 20% to maintain a perfect horizontality of the combine, and optimize the loading of the grain pan and deliver the same outstanding performance as on level ground. The Everest system can also work in combination with a self-levelling shoe to deliver 100% efficiency on slopes of up to 36% and improves combine capacity even in the most demanding conditions. As The cab remains horizontal till 20% the operator can maintain his attention for all day without any tiredness due to the position of the combine in sidehills. The Everest system is totally integrated and do not modify the structure of the base

unit. This system can be removed when changing the combine giving a real customer and dealer benefit. In top of all these benefits, the main one is that this system doesn't require any maintenance attention for long harvest day, season after season, without any issues. This system was developed in close collaboration with I2J Solutions, a French company specialised in providing combines equipments.

New Holland Agriculture's reputation is built on the success of our customers, cash crop producers, livestock farmers, contractors, vineyards, or groundscare professionals. They can count on the widest offering of innovative products and services: a full line of equipment, from tractors to harvesting, material handling equipment, complemented by tailored financial services from a specialist in agriculture. A highly professional global dealer network and New Holland's commitment to excellence guarantees the ultimate customer experience for every customer.
