

ASABE names innovations from Case IH and New Holland Agriculture to 2018 AE50 list

London, December 13, 2017

The American Society of Agricultural and Biological Engineers' (ASABE) 2018 AE50 list has included nine innovative product technologies from Case IH and New Holland Agriculture, the global agricultural equipment brands of CNH Industrial N.V. (NYSE: CNHI / MI: CNHI). The AE50 awards honor the year's most innovative designs in engineering products or systems for the food and agriculture industries. Companies from around the world submit entries to the annual competition, of which 50 of the best products are judged by a panel of international engineering experts as being the best to advance engineering for the food and agriculture industries.

Case IH has received four 2018 AE50 awards. The **In-Cab Split-Row Lift System for Case IH Early Riser® 2140 Pivot Transport Planter** hydraulically lifts split row units to switch crop types, eliminating manual lifting or lowering of up to 16 rows. The **CVXDrive™ for Case IH Steiger® and Quadtrac® tractors** is the first continuously variable transmission for an articulated four-wheel drive tractor and delivers the highest horsepower available on the market: up to 605 at peak. The **Nutri-Placer 930 HSLD (High-Speed Low Disturbance) Fertilizer Applicator** can cover over 500 acres in a day. The **Trident 5550 Liquid/Dry Combination Applicator** is the industry's first combination applicator on a true row-crop chassis and is able to be changed from liquid to dry in under an hour.

New Holland Agriculture has five innovations named to the top 50. The **Dynamic Command™** transmission is an industry-exclusive for T6 tractors in the 95 to 120 horsepower segment and enhances productivity with more gears in the working range. **CustomSteer™** is a new variable ratio steering feature, available on T6 and T7 series tractors, that reduces the numbers of turns required to achieve lock-to-lock steering. The **IntelliTurn™** end-of-row turning automation raises the bar for in-field efficiency by executing end-of-row turns on behalf of the operator in even the most challenging field shapes. It is offered on T6, T7, T8 and T9 tractors. The **Optispread Plus™** residue management system for New Holland CR combines provides an improved residue spreading solution to combine operators, delivering excellent chopping performance and even spreading of the residue over the width of current and future combine

headers. The **Guardian SP310F** high clearance self-propelled front boom sprayer is designed to give operators the flexibility to spray effectively across all crops and during all stages of crop growth thanks to its industry-leading crop clearance of up to 78 inches.

***CNH Industrial N.V.** (NYSE: CNHI / MI: CNHI) is a global leader in the capital goods sector with established industrial experience, a wide range of products and a worldwide presence. Each of the individual brands belonging to the Company is a major international force in its specific industrial sector: Case IH, New Holland Agriculture and Steyr for tractors and agricultural machinery; Case and New Holland Construction for earth moving equipment; Iveco for commercial vehicles; Iveco Bus and Heuliez Bus for buses and coaches; Iveco Astra for quarry and construction vehicles; Magirus for firefighting vehicles; Iveco Defence Vehicles for defence and civil protection; and FPT Industrial for engines and transmissions.
