Case IH Bolsters Its Draper Head Lineup With 3100 Series II Models

New models provide more durability and increased reliability to help producers harvest more of what they grow

RACINE, Wisconsin (February 13, 2019)

Case IH is upgrading its header series with the new 3100 Series II rigid and flex draper headers. Featuring 118 product enhancements since the original 3100 Series draper header introduction, these new improvements deliver improved durability, increased reliability and unmatched harvest performance and ground-following capabilities.

“Case IH draper heads allow you to harvest more of what you grow. With superior crop feeding and less susceptibility to crop moisture, harvest efficiency is improved and producers can harvest more acres per day,” said Ryan Blasiak, Case IH harvesting marketing manager.

Enhanced draper head models provide more durability and increased reliability to help producers harvest more of what they grow.

With models from 30 to 45 feet, the latest updates to the Case IH 3100 Series II draper head design improvements enhance reliability and durability at harvest. Features such as the cam action reel, CentraCut™ Knife Drive and narrow end dividers allow you to put more grain in the tank. The Case IH 3162 Series II TerraFlex™ headers feature a truly flexible cutterbar and new airbag suspension in the center section. Plus, cast flex arms with cutouts prevent material buildup to increase uptime.

“With the Series II updates, we provide superior flotation regardless of harvesting conditions,” Blasiak said. “If it’s necessary to harvest in soft conditions, producers can feel confident their header won’t push in the field.”

Backed by a two-year factory warranty, Case IH draper heads offer superior crop feeding and less susceptibility to crop moisture. The exclusive in-cab deployment of low-speed transportation system requires no header cart. Exclusive CentraCut Knife Drive with center-mounted knife drive improves performance across the cutterbar and minimizes cutterbar vibration. The CentraCut Knife Drive offers two times the cutting force as a dual wobble box and three times as a single wobble box. Helical-cut gears ensure the cutter bar never falls out of timing. Narrow end dividers (6-inch width) compared with competitive 10-inch wobble-box-equipped headers reduce crop knockdown and increase grain savings.
