

FPT INDUSTRIAL POWERS THE NEW IVECO DAILY

Turin, April 12, 2019

FPT Industrial engines are the power behind the new **IVECO Daily**, officially unveiled today for the European market. Thanks to FPT Industrial's expertise and technology, the new Daily model is the first vehicle in its category to comply with the **Euro 6-D Temp & Euro VI-D** emission standards, according to the most recent international test procedures for light commercial vehicles.

The **F1 Series** powering IVECO Daily comes from more than 35 years of experience of FPT Industrial in commercial vehicles. In this sector, the Brand is currently the **European market leader** with some 300,000 units produced per year. Notably, IVECO Daily was awarded three times the title of "**International Van of the Year**"- in 2000, 2015 and 2018.

In the last three years, the new Daily project has been at the center of the **Research and Development** activities of IVECO. Supporting its sister brand in developing an innovative and efficient product, FPT Industrial is providing engines that deliver best-in-class performance with long service intervals.

FPT Industrial 2.3-liter F1A engine

IVECO Daily is equipped with engines of 2.3 litres or 3.0 litres, delivering power from 116 hp to 210 hp, also available in **Compressed Natural Gas (CNG)**. They are produced at FPT Industrial's plant in Foggia, Italy.

With the Euro 6D Temp & Euro VI-D emission standards taking effect from September 2019, F1 Series adopts an external cooled Exhaust Gas Recirculation (EGR) with Selective Catalytic

Reduction (SCR), as it is the best solution on **Light Commercial Vehicles (LCV)** applications to minimize vehicle dimensions constraints. This allows the new Daily to comply with the regulation both on the **Worldwide Harmonized Light Vehicle Test Procedure (WLTP)** and on **Real Driving Emissions tests (RDE)**.

To further improve fuel consumption and performance, the F1 Series has a new Electronically controlled Variable Geometry Turbocharger (e-VGT) offering faster boost control, smoother transient response and torque optimization even at low speed.

Together with advanced integrated driving systems, this allows the Daily to **reduce fuel consumption** by 10% in urban missions. This translates into **lower emission levels** and, in the Natural Gas version, represents additional 95% less **CO₂** comparing to Diesel when adopting biomethane, 97% less **Particulate Matter (PM)** and 37% less **NO_x** in relation to the emission limits.

The e-VGT also helps in boosting the 3-litre engine's Top Power up to 210 hp, now with Heavy-Duty homologation, suitable for specific applications like minibuses, firefighting and heavy vehicles.

FPT Industrial's engines for IVECO Daily also contribute to achieve maintenance cost savings up to 10% in urban missions as a result of product improvements and longer oil change intervals. In addition to that, the new, **bigger oil sump**, available for F1A and specifically designed for long distance missions, **extends service intervals from 50,000 to 60,000 km**.

FPT Industrial is a brand of CNH Industrial, dedicated to the design, production and sale of powertrains for on and off-road vehicles, marine and power generation applications. The company employs more than 8,000 people worldwide, in ten manufacturing plants and seven R&D Centres. The FPT Industrial sales network consists of 73 dealers and about 800 service centres in almost 100 countries. A wide product offering, including six engine ranges from 42 hp up to 1,006 hp, transmissions with maximum torque of 200 Nm up to 500 Nm, front and rear axles from 2 to 32 ton GAW (Gross Axle Weight). FPT Industrial offers the most complete Natural Gas engines line-up on the market for industrial applications, including engine ranges from 136 hp up to 460 hp. This extensive offer and a close focus on R&D activities make FPT Industrial a world leader in industrial powertrains. For further information, visit www.fptindustrial.com.
