Lane Support Systems	○
Speed Assist Systems	●
Attention Assist	●

● STANDARD    ○ FITTED AS OPTION    ✗ NOT AVAILABLE

#### Verdict

The Vito offers a lot of safety equipment and, in general, that equipment functions well. While performance of the safety systems does not match the state-of-the-art technology used on modern passenger cars, the Vito represents one of the best commercial vans on sale to those interested in safety.

Comment

The Vito has a radar only autonomous emergency braking (AEB) system as an option in most countries but as standard in the UK. The system combines AEB with Forward Collision Warning (FCW) that also detects vulnerable road users like pedestrians and cyclists. In tests of its reaction to a vehicle in front, the system performed well at low speeds and where the target was straight ahead or only slightly offset. At the higher test speeds and when the offset was larger, performance deteriorated and was predominantly poor for the FCW tests at large offsets. In tests of the system’s response to pedestrians and cyclists, performance was adequate, with collisions avoided or mitigated in most test scenarios.

The optional Lane Support System (LSS) met Euro NCAP’s requirements for lane departure warning but lane keep assist (where the system gently steers the vehicle back into lane) is not available. A blind-spot information system is also available as an option.

A driver-set speed limiter helps to prevent over-speeding. It is standard equipment in some countries, but the speed limit information function is available only as an option. There is a standard-fit seatbelt reminder system for both the driver and passenger seat.
