<b>Speed Assist</b>	Systems supporting the driver to maintain a safe speed.	<b>15%</b>	
<b>Occupant Status</b>	Driver attention assistance and seat belt reminders.	<b>15%</b>	

## RATINGS EXPLAINED

To influence purchasing decisions for safer van choices, Euro NCAP annually conducts a series of ADAS tests on the best-selling commercial vans on the European market. Combined, these vans cover about 98 percent of the new van sales and represent the European situation well.

The fitment of each system was checked from publicly available sources in the biggest European markets (France, Germany, Italy, Spain, UK), plus Sweden, the Netherlands and Luxembourg. The data was verified by the vehicle manufacturer.

The availability (standard, optional or not available) is shown in a graphical format with a corresponding table for each van, system and market respectively on the euroncap website.

Available ADAS functions (whether optional or standard) on each commercial van were tested using Euro NCAP Safety Assist protocols, adapted to commercial vans where needed. Each van was carrying half of its permissible loading mass, a typical load for a commercial van in daily use. In addition, a Seat Belt Reminder assessment was carried out for each van.

The test scores of each system were weighted and combined into an overall score for each van. This weighted overall performance score places each van tested in one of the following categories: Gold, Silver, Bronze, or Not Recommended.
