SPECIFICATION

Tested Model	BMW 1-Series 1.5 M Sport, LHD
Body Type	- 4 door saloon
Year Of Publication	2025
Kerb Weight	1541kg
VIN From Which Rating Applies	- all BMW 2 Series Gran Coupes
Class	Small Family Car

General comments

The BMW 2 Series Gran Coupé is a partner to the 1 Series tested earlier in 2025. Some additional tests have been performed on the 2 Series Gran Coupé, but this assessment is primarily based on tests performed on the 1 Series.

Comments

The passenger compartment of the BMW 2 Series Gran Coupé remained stable in the frontal offset test. Protection of the driver's chest was rated as weak, based on dummy readings of compression during the test. Protection of the knees and femurs was marginal. Analysis of the deceleration of the impact trolley during the test, and analysis of the deformable barrier after the test, revealed that the BMW 2 Series Gran Coupé would be a moderately benign impact partner in a frontal collision. In the full-width rigid barrier test, dummy readings of chest compression indicated weak protection for the chest of the driver and the rear seat passenger. However, in both the side barrier test and the more severe side pole impact, good protection was provided to all critical body areas and the BMW 2 Series Gran Coupé scored maximum points in this part of the assessment. Control of excursion (the extent to which a body is thrown to the other side of the vehicle when it is hit from the far side) was found to be adequate. The BMW 2 Series Gran Coupé has a countermeasure to mitigate against occupant-to-occupant injuries in such impacts. The airbag performed well in Euro NCAP's tests with dummy readings indicating good protection for both the driver and passenger. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision. A geometric analysis of the rear seats also indicated good whiplash protection. The car has an advanced eCall system which alerts the emergency services in the event of a crash, and a system to prevent secondary impacts after the car has been in a collision. BMW demonstrated that the doors and windows would be openable to allow occupants to escape in the event of vehicle submergence.

Comments

In both the frontal offset and the side barrier tests, protection was good or adequate for all critical body areas for the 6 and 10 year dummies. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. Clear information is provided to the driver regarding the status of the airbag and the system was rewarded. The BMW 2 Series Gran Coupé is not equipped with 'child presence detection', a system which can alert others if children have been left in the car. All of the child restraint types for which the BMW 2 Series Gran Coupe is designed could be properly installed and accommodated in the car.

Changing lane across the path of an overtaking motorcyclist	

Comments

The BMW 2 Series Gran Coupé has an 'active' bonnet. Sensors in the bumper detect when a pedestrian has been struck and actuators lift the bonnet surface to provide more space to the hard structures underneath. BMW showed that the system worked robustly over a range of speeds and for different statures. Accordingly, the car was tested with the bonnet in the raised, deployed position. Protection of the head of a struck pedestrian or cyclist was largely good or adequate, with poor results recorded on the stiff windscreen pillars and at the base and top of the screen. Protection of the pelvis was good or adequate at all test locations. Protection of the femur was good at all test locations, while that of the knee and tibia was at least adequate. The autonomous emergency braking system of the BMW 2 Series Gran Coupé responds to vulnerable road users such as pedestrians and cyclists, as well as to other vehicles. In tests of its response to pedestrians, the system performed adequately. Protection of those to the rear of the car is available as an option and is not included in this assessment. The system performed well in tests of its reaction to cyclists, including 'dooring', where a door is opened into the path of a cyclist approaching from behind. The system's response to motorcyclists was good.

Comments

Overall, the performance of the autonomous emergency braking (AEB) system was good in tests of its reaction to other vehicles. A seatbelt reminder system is fitted as standard to the front and rear seats. The car has an indirect driver status monitoring system as standard, detecting driver fatigue but not distraction. The lane support system gently corrects the vehicle's path if it is drifting out of lane and also intervenes in some more critical situations. The speed assistance system identifies the local speed limit. The driver can choose to allow the limiter to be set automatically by the system.
