VERDICT

The Škoda Peaq achieves a well-deserved 5-star rating, demonstrating excellent all-round safety performance, and excelling in the area of Crash Protection.

Safe Driving

The Škoda Peaq identifies seatbelt mis-use, such as a diagonal belt worn behind the body, and also the presence of all rear seat occupants. There is no recognition of occupants sitting 'out of position', such as the front passenger with their feet on the dashboard, but occupants are classified, allowing optimisation of restraint characteristics. The Škoda Peaq is not equipped with Child Presence Detection, a system which issues a warning if a child has been left unattended in the car. The driver monitoring system identifies driver fatigue and various types of distraction and phone use. The Peaq makes excellent use of manual controls for important driving functions, and also for comfort and infotainment, scoring full points in this part of the assessment. The speed assistance system of the Škoda Peaq proved very effective. In a test drive of around 2000 km through Germany, Austria, Poland and Slovakia, the system correctly identified the limit in 87 percent of cases, representing 92 percent of the distance covered. The Peaq has adaptive cruise control which generally responded well when potential hazards were identified.

Crash Avoidance

The Škoda Peaq is equipped with all of the latest crash avoidance technologies, and generally scores well, including the challenging turning and crossing scenarios. The lane support system scores full points for driver acceptance, the car tailoring the response to the perceived alertness of the driver. The car warns against 'dooring', where a door is opened into the path of a cyclist approaching from behind.

Crash Protection

The Peaq scores 94 percent in this part of the assessment, with exceptional results in all of the crash tests. Good protection is provided for all critical parts of the body for all occupants in the full-width and offset frontal tests, and also in the side barrier and side pole impacts. Additional data and validated computer modelling demonstrated good protection in various combinations of test configuration and occupant stature. A centre airbag, to mitigate injuries caused by occupant to occupant contact in a side impact, is standard equipment. The airbag worked well in Euro NCAP's pole test, with good protection of the head of the driver and front passenger. Even the protection of vulnerable road users is generally good: predominantly adequate for the head of a struck pedestrian but good at all test locations for the femur and the knee and tibia.

Post Crash

The Peaq automatically applies the brakes after a crash to prevent secondary impacts, and the advanced eCall system provides detailed information about the car's occupants and the type of impact sustained by the car. The Škoda Peaq scored full points for its provisions for quick and safe extrication by first responders.
