

8 Port 10G Smart Managed Plus Switch (XS708E)

NETGEAR BUSINESS

Which NETGEAR 10 Gigabit Switch is right for you?

NETGEAR 10 Gigabit Switch Advantages

Lifetime Limited Warranty: NETGEAR switches exceed the high standards required for a stable and robust network infrastructure. They are backed by an industry-leading warranty, demonstrating our commitment to quality and performance.

Designed for Whisper-Quiet Operation: Most switch models are fanless or designed to minimize fan noise to protect your business environment.

Power Saving and Energy Efficient: We care about saving energy for your business so our switches are compliant with IEEE802.3az Energy Efficient Ethernet mode.

Blazing Fast 10G Switch Speed: Maximizes your performance today and future-proofs your network's bandwidth for tomorrow. Many models offer multi-gig support for higher speeds on existing CAT5e cabling.

NETGEAR Switches: Designed to meet your Business needs.

Home & Small Business

Unmanaged: Plug and play solution to connect all your network devices without the complications of configuration or management software -- yet achieve a reliable and secure network.

Smart Managed Plus: Empowers growing small businesses with basic capabilities to configure, secure, and monitor their network beyond simple connectivity at an affordable cost - an ideal upgrade from unmanaged switches.

Small & Medium Business

Smart Managed Pro: For larger organizations requiring advanced configuration and refined control for secure setup, access, and management of complex business networks. Supports the needs of edge networking and automated management of prioritized voice, video, and data traffic.

Smart Cloud: Provides fully integrated management, visibility, and control from any device, anywhere. Advanced configuration and remote access using the NETGEAR Insight app and cloud portal for unparalleled flexibility.

Enterprise

Fully Managed: An affordable, powerful, and future-proof networking infrastructure designed for enterprise and campus networks, with core and edge networking, and AV-over-IP solutions. Includes integrated security, high availability, delivery optimization, and enhanced manageability.
