What if California Citrus Disappeared

SCRIPT: Here in California, Citrus is part of our lives every day. But what if it all just... disappeared. (:06)

A devastating plant disease called Huanglongbing (hwong-long-bing) or HLB, is spread by an insect called the Asian citrus psyllid. The disease is fatal for citrus trees, and it might be found in your own backyard. (:11)

It's important that we all do our part to keep California citrus safe. Don't let California Citrus disappear. To learn about inspecting your backyard citrus and reporting pest and disease symptoms visit California Citrus Threat dot org. (:13)
