The evolution of evoPOWER further enhances the foot-to-ball relationship. Grounded in the principles of barefoot kicking, the boot is a natural extension of the foot. It's engineered to create a smooth kicking surface at the moment of kicking impact. evoPOWER 1.2 further maximizes that ‘sweet spot’ when kicking. The AccuFoam lining is extended beneath the upper’s forefoot area to even out the curvatures of one’s foot during ball impact. The addition of the GripTex vamp print enhances ball control in all conditions. It’s a boot designed to amplify accuracy with every touch and add more power to every shot.
